

*Changes as discussed on 6/6/2016 (Saturday) meeting

① No continue button after language selection, directly second screen comes. (✓)

② A separate counter for certificate print, user only have to download his/her certificate via pchehan portal using our Kiosk system and then same flow for payment, only user have to collect token receipt, and take his token receipt to a separate counter for printing certificate. token receipt has mentioned all information regarding certificate print & certificate is stored on cloud storage after it downloaded and payment successfully connect certificate to token receipt. (✓)

③ On Kiosk machine, now marriage block only have certificate download facility same as birth or death [download & search and download] same flow as birth or death, and certificate print via printer counter (dashboard) using token receipt. (✓)

④ There are offline fee option also on Kiosk print certificate download & print and search & print modules. In offline fee option "pending fee" status mentioned on token receipt and printer counter operator collect fees in cash and change depending status to fulfilled then print certificate [certificate stored in cloud storage].
 ⑤ Printer operator should manually verify the e-signature of downloaded certificate using Adobe reader software
 ⑥ Printer operator counter / dashboard is universal for all type of certificate printing facilities. ex → downloaded, search & download, correction, new registration. (✓)

⑦ In search & print module combined fees (20+55) of search and print is collected after certificate is downloaded. (✓)

⑧ Flow of print certificate (✓)
