

① General framework of the system, which consists of a number of modules, each of which performs a specific function.

② The system is designed to be modular, allowing for the addition or removal of components without affecting the overall operation.

③ The system is designed to be scalable, allowing for the addition of more modules as the system grows.

④ The system is designed to be secure, with all data being encrypted and transmitted over a secure channel.

⑤ The system is designed to be reliable, with all components being tested thoroughly before being deployed.

⑥ The system is designed to be user-friendly, with a simple and intuitive interface.

⑦ The system is designed to be flexible, allowing for the integration of new technologies as they become available.

⑧ The system is designed to be cost-effective, with all components being sourced from reputable suppliers.

⑨ The system is designed to be maintainable, with all components being easily accessible for repair or replacement.

⑩ The system is designed to be future-proof, with all components being designed to last for many years.

⑪ The system is designed to be secure, with all data being encrypted and transmitted over a secure channel.

⑫ The system is designed to be reliable, with all components being tested thoroughly before being deployed.

⑬ The system is designed to be user-friendly, with a simple and intuitive interface.

⑭ The system is designed to be flexible, allowing for the integration of new technologies as they become available.

⑮ The system is designed to be cost-effective, with all components being sourced from reputable suppliers.

⑯ The system is designed to be maintainable, with all components being easily accessible for repair or replacement.

⑰ The system is designed to be future-proof, with all components being designed to last for many years.

⑱ The system is designed to be secure, with all data being encrypted and transmitted over a secure channel.

⑲ The system is designed to be reliable, with all components being tested thoroughly before being deployed.

⑳ The system is designed to be user-friendly, with a simple and intuitive interface.
