

gustatory (taste) & olfactory (smell) are known as chemoreceptors.

① Gustatory epithelium is found in the tongue.

② It is a stratified squamous epithelium.

③ It contains taste buds.

④ Each taste bud contains 5-10 taste cells.

⑤ The taste cells are connected to the brain by the gustatory nerve.

⑥ The taste buds are located on the tongue.

⑦ The taste buds are found in the papillae of the tongue.

⑧ The taste buds are found in the vallate papillae.

⑨ The taste buds are found in the fungiform papillae.

⑩ The taste buds are found in the foliate papillae.

⑪ The taste buds are found in the lingual papillae.

⑫ The taste buds are found in the circumvallate papillae.

⑬ The taste buds are found in the vallate papillae.

⑭ The taste buds are found in the fungiform papillae.

⑮ The taste buds are found in the foliate papillae.

⑯ The taste buds are found in the lingual papillae.

⑰ The taste buds are found in the circumvallate papillae.
